

Managing Event Pilot App Alerts

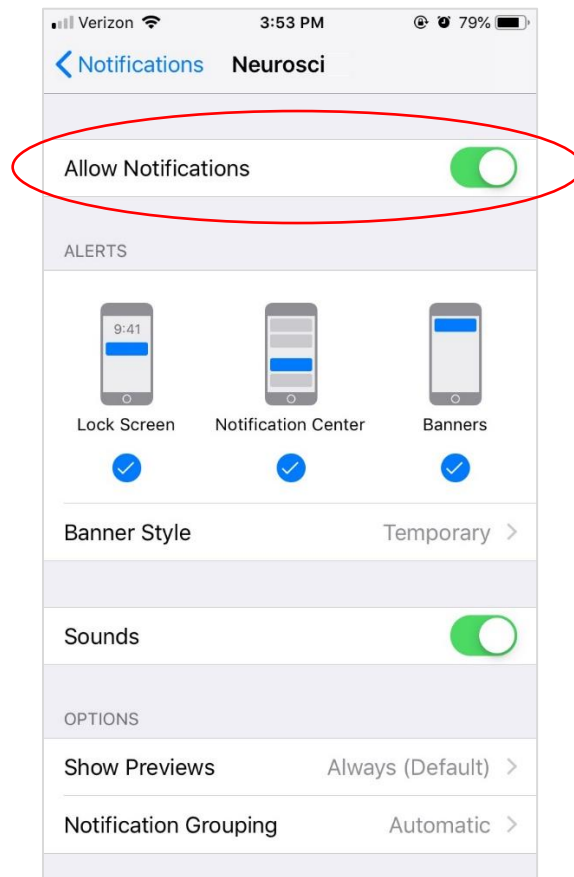

When initially installing the Society for Neuroscience annual meeting mobile app, it will ask you if you want to accept Notifications from this app.

Accepting this option by clicking "allow" will enable you to see alert messages from the association, such as Session Room changes, room overflow options, and other information to help you stay up-to-date on program changes and important announcements. See image below. If you would not like to get such notifications, then select "Don't Allow" at the app's initial launch.

If, at a later time, you change your mind about allowing (or not allowing) the app notifications, you can manage this by clicking on your device's "Settings" icon and scrolling to "Notifications."

Although the example images are shown using an Apple device, the app is controlled similarly on Android devices.
